Project 5

William Crutchfield

jMonkeyEngine SDK 3.1.0
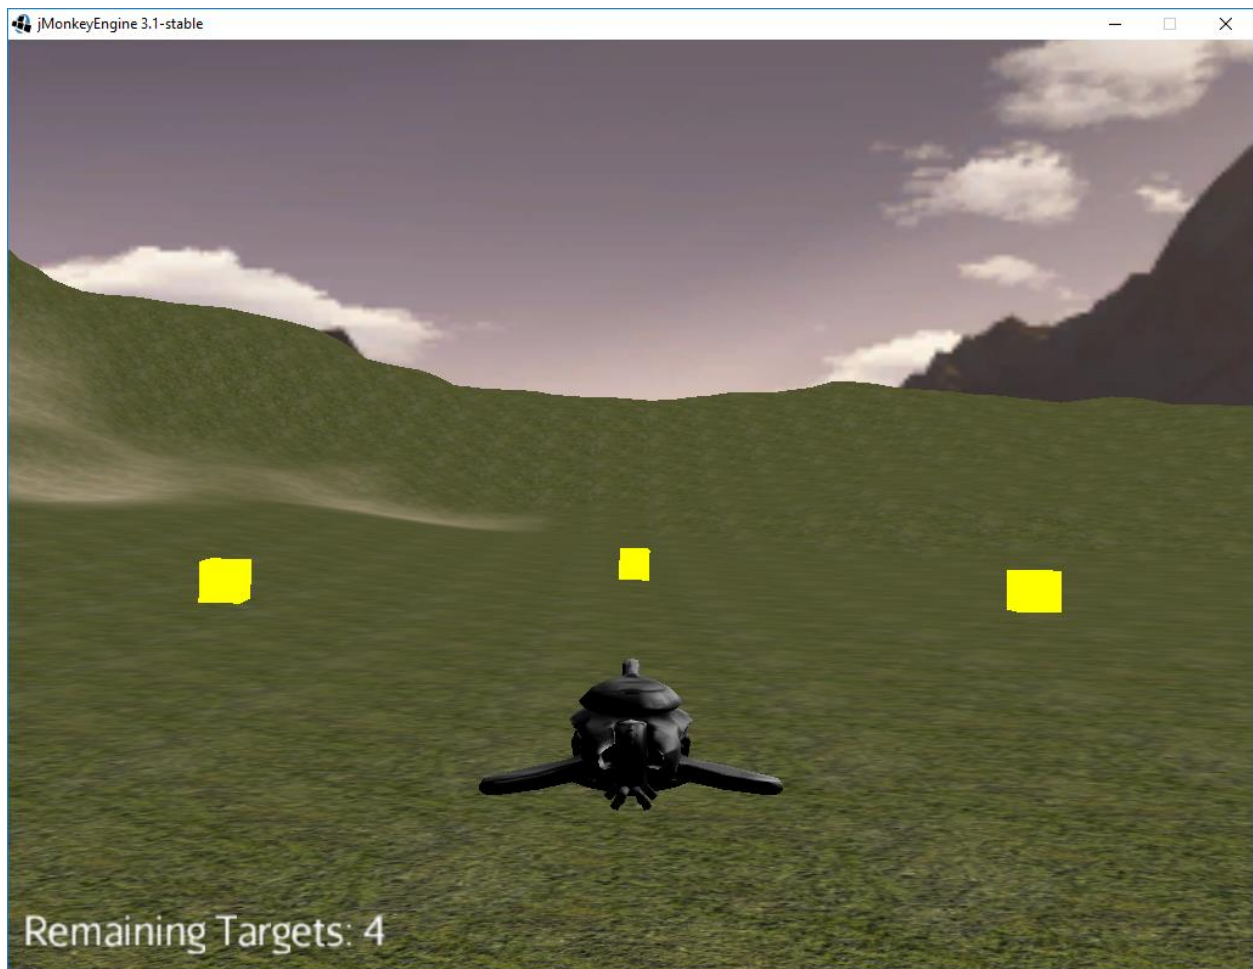

10/15/17

Contents

Final Product

When running the game, you will see a window that looks like the one below! This game is built off my previous project with the tank! In this game, the goal is to shoot all the targets. You can move around with W,A,S,D, and shoot with Left Click. When hitting a target, the target will turn red, or "be destroyed". Once all the targets are red, you win the game!

This is what it looks like when a target is shot.

This is what it looks like when all the targets have been hit!
